

### CALICO COATHANGER COVERS

1. Wash the calico in 60 degree hot water to pre shrink and remove any contamination. Dry flat and iron out any wrinkles.
2. Cut two pieces of calico aligning lower edge A to the selvage or cut along edge B if no selvage.
3. Open out the two pieces and secure them in the centre with a pin.
4. Sew a half inch seam on both sides stopping at X to allow a gap for the coat hanger hook.
5. Trim lower sides and clip upper sides almost as far as the seam.
6. Turn inside out.
7. If no selvage bottom edge turn up two thicknesses of fabric at B to make a double hem inside the cover.
8. Secure both sides with a quarter inch seam avoiding the hook gap at the top.
